

## PROGRAMME

## CONCEPT

the studioe comprised of several exersicesto help us understand the basics of anthropometry. Familiarizing the student with Static dimensions of human body Understanding body movements through study of daily activities and space required. To develop an understanding that a single activity requires several postures With the basic understanding of human the following exercise was to make them observant regarding how space is both formed and manipulated through any activity. are given an opportunity to explore their understanding of space requirements as per activities through the previous exercises and translate it into a 'space' for one person. The students also explore levels through stairs, ramps, etc. as means of connections to the different volumes. we have also explored light through modulation of openings.
