

## NIRMA UNIVERSITY

<b>Institute:</b>	Institute of Technology
<b>Name of Programme:</b>	Integrated B.Tech.(CSE)-MBA
<b>Course Code:</b>	CSI0602
<b>Course Title:</b>	Design and Analysis of Algorithms
<b>Course Type:</b>	Core
<b>Year of Introduction:</b>	2021-22

### Credit Scheme

L	T	Practical Component				C
		LPW	PW	W	S	
3	0	2	-	-	-	4

### Course Learning Outcomes (CLO):

At the end of the course, students will be able to –

1. illustrate the notion of algorithmic complexity and logic of fundamental algorithms
2. apply fundamental algorithms in real life problem solving
3. identify and evaluate suitable data structures to solve a problem effectively and efficiently
4. build formal illustration of algorithmic complexity

### Syllabus:

**Total Teaching hours: 30**

Unit	Syllabus	Teaching hours
Unit-I	<b>Elementary Algorithmics:</b> Efficiency of Algorithms, Average & worst-case analysis, Elementary Operation	03
Unit-II	<b>Analysis Techniques:</b> Empirical, mathematical, Asymptotic analysis and related unconditional and conditional notations.	05
Unit-III	<b>Analysis of Algorithms:</b> Analyzing control structures: sequencing, “For” loops, Recursive calls, “While” and “repeat” loops, Amortized analysis	05
Unit-IV	<b>Solving Recurrences:</b> Intelligent guesswork, Homogeneous recurrences, Inhomogeneous Recurrences, Change of variable, Range transformations, Master Theorem, Recurrence Tree	07
Unit-V	<b>Data Structures:</b> Heaps, Binomial heaps, Fibonacci heaps, Disjoint set structures	05
Unit-VI	<b>Greedy Algorithms:</b> Graphs: Minimum spanning trees-Kruskal’s algorithm, Prim’s algorithm, Graphs: Shortest paths	03
Unit-VII	<b>Divide-and-Conquer:</b> Multiplying large integers, Binary search, sorting: sorting by merging, quick sort, finding the median, Matrix multiplication, Exponentiation, approaches using recursion, memory functions.	06
Unit-VIII	<b>Dynamic Programming:</b> The principle of optimality, Various applications using Dynamic Programming.	05
Unit-X	<b>Branch and Bound, Backtracking:</b> Design of some classical problems using branch and bound and Backtracking approaches.	04
Unit-X	<b>Randomized and Approximation Algorithms:</b> Design of some classical problems.	02

Self-Study: The self-study contents will be declared at the commencement of semester. Around 10% of the questions will be asked from self-study contents.

- Suggested Readings/References:
1. Charles E. Leiserson, Thomas H. Cormen, Ronald L. Rivest, Clifford Stein - Introduction to Algorithms, PHI
  2. Gilles Brassard & Paul Bratley, Fundamentals of Algorithmic, PHI.
  3. Ellis Horowitz, SartajSahni, SanguthevarRajasekharan, Fundamentals of Computer Algorithms, Galgotia.

Suggested List of Experiments:	Sr. No.	Title	Hours
	1	To implement an iterative and full recursive version of following sorting algorithms: Selection Sort, Insertion Sort and Bubble Sort	02
	2	To implement Quick Sort algorithm by randomly selecting any element of an array as the pivot element. Display the output after each call to the "PARTITION" function finishes	02
	3	To implement merge sort for specified scenarios	02
	4	To implement Prim's algorithm	04
	5	To implement Binomial Heap and perform all its operations.	04
	6	To implement the chained matrix multiplication algorithm using dynamic programming	02
	7	To solve the 0/1 Knapsack problem using Branch-and-Bound technique	04

Suggested Case List: -NA-
