|  |  | $\mathbf{4 . 5}$ | $\mathbf{3}$ |

| Course Code | DSK122 |
| :--- | :--- |
| Course Title | Geometric Constrution -3D |

## Course Learning Outcomes (CLO):

The course if focused on understanding the construction of 3 dimensional Polyhedrons with precision and skill
The course aims to make the learner understand mathematical properties of 3 dimensional dorms, their planes, angles, indices, axis and their current mathematical absolutes geometrically through the study of relationships of constituent parts
The course will also inculcate in the student the ability to analyze forms and their internal structures.

## Syllabus:

Teaching hours:67.5

## Constructions of Polydrons:

Introduction to the construction of simple polydrons- tetrahedron, cube, octahedron, Dedecahedron, Isosahedraon in paper and as frame structures
Tessalating Polyhedrons:
Introduction to construction of tessalating three dimensional polyhedrons like space lattices
Dissecting Polyhedrons:
Sections of Polyhedrons will be constructed to understand the interrelationships between all the regular polyhedrons
Crafting Innovative Tessalating 3 Dimensional Forms
Surface Planes of Polyhedrons will be evolved as distinct forms to tessellate with adjoining planes in Thermocol/PoP/ Clay etc.
The exercise can be then applied to space filling 3 dimensional, tessellating structures

## Suggested Readings:

w.e.f. Academic year _2017 and onwards

Key: L= Lecture, $\mathrm{T}=$ Tutorial, $\mathrm{P}=$ Practical, $\mathrm{C}=$ Credit
