CapEx database is about new capacities in the making. It is therefore a database of the shape of things to come. It is about where enterprises can find their future markets, their future competition or future infrastructure.

CapEx helps us anticipate the future.

CapEx is updated continuously and it therefore helps us tweak our expectations of the future wherever necessary.

CapEx is a database of projects that aim to create new capacities in India. These projects are often in search of financiers and project consultants and implementation agencies. They are similarly in search of plant and machinery suppliers and whole stream of suppliers that help create new factories, offices or infrastructure.

The CapEx service delivers this unique database over a web-browser and allows you to look up the details of individual projects. As these are updated continuously, CapEx automatically becomes an important internal monitor for business strategy.

https://capex.cmie.com

Centre for Monitoring Indian Economy Pvt. Ltd.

CapEx is a database of investment projects that involve the setting up of new capacities. It is about the announcement of such projects, their implementation and their final culmination into new capacities.

The database is a lot more than a mere listing of projects.

It identifies new projects announced and tracks their progress in implementation through their end. The lifecycle of a project ends when the new capacity is created and deployed into production.

Sometimes, the end is less rewarding. A project may get abandoned before its completion. Or, its implementation may get suspended because of some reason.

The CapEx database tracks projects through this journey and eventual conclusion. It captures this life-cycle of projects.

The CapEx service provides detailed information on individual projects. Information is collected from public sources and through direct contact with the companies engaged in executing the projects.

A useful derivative of the CapEx database is the set of aggregates that are generated using the project-level database every quarter.

The CapEx database provides a range of projections of new capacities expected in the near future.
