ProwessIQ

Better than a Google search!

If you are looking for companies that meet a set of criteria based on their performance, then you need ProwessIQ, not a Google search. Not even Google Finance!

ProwessIQ is an interactive querying system that runs on the Prowess database. The Prowess database contains financial performance data of over 50,000 Indian companies. It contains data from 1989.

In ProwessIQ you can conduct a search to find all non-government companies with a market capitalisation of over Rs.1,000 million, a PE ratio between 5 and 10, a dividend yield of over 2 per cent and a debt:equity ratio of less than 1. Prowess will find all companies that meet such a set of conditions and display their names with values of all the variables stated in the conditions. This is just an example, of course.

Articulating a query completely or unambiguously is often a challenge while searching for companies. The ProwessIQ user interface helps the user in articulating the requirements completely and unambiguously.

Reap the benefits of interactive querying with ProwessIQ.

ProwessIQ

ProwessIQ
for Interactive Querying
of the Prowess Database

ProwessIQ is a query-able database of over 50,000 Indian companies.

The Prowess database includes all companies traded on the National Stock Exchange and the Bombay Stock Exchange, thousands of unlisted public limited companies and hundreds of private limited companies.

The database is built from Annual Reports, quarterly financial statements, Stock Exchange feeds and other reliable sources.

There are over 3,500 data-fields per company in the Prowess database. The database is standardised to enable inter-company and temporal comparisons. ProwessIQ provides time-series data from 1989.

Prowess is most useful in applications where we need to find companies that satisfy a set of conditions. ProwessIQ is designed to facilitate the clear articulation of the conditions of a search and the delivery of a well-formatted output of the consequent results.

There are 61 different Query Triggers in ProwessIQ. Each is designed to facilitate the querying of a distinct part of the database. Results of each of the Query Triggers can be easily combined with those of others. Querying can therefore be an iterative process to discover the companies that best meet the criteria articulated by you. This iterative process of querying is the power of ProwessIQ.

The full suite of Query Triggers is sophisticated, replete with specially developed functions to facilitate easy as well as some intense querying.

	Manufacturing	Mining	Electricity	Services (other than financial)	Construction, real estate & irrigation	Financial services	Diversified	Total Companies
