### [The Logic of Legal Argumentation Multi-Modal Perspectives](#)

**Author:** Marko Novak

**Publisher:** Routledge, 2024

**ISBN:** 9781032557847

Multi-modal argumentation with its logical, emotional, visceral and kisceral arguments is an important addition to logical argumentation, especially when real-life situations are considered. It does not discard logic but adds other modes of argumentation to complement it, to emphasize the realistic environments of communication. In this sense, the multi-modal theory is important for the area of legal argumentation, where even in the reasoning of judicial decisions traces of a flesh-and-blood personality, who decided the case and wrote the reasons, can be found. This book presents a comprehensive analysis of this informal logic in legal argumentation and its practicality within the law. It argues that by building on the dialectical and rhetorical models of legal argument, the former being important for clear cases while the latter for unclear ones, ....

New edition taking account of the substantial developments of the last decade. It considers the Trump US tax reforms of late 2017 and then the Biden reforms of 2022. This edition also incorporates many changes resulting from international tax developments including the Base Erosion and Profit Shifting reports and the current Two Pillar approach. The edition documents how corporate and international tax systems are increasingly integrated. This is particularly the case with minimum taxes, hybrid financial instruments and excessive debt financing. The interface between corporate tax base and financial accounts is another area of particular interest. Countries continue to tinker with the use of corporate losses, corporate tax rates and dividend relief. Other areas of development include corporate tax subjects, buy backs and dividend stripping.

### States, Firms, and Their Legal Fictions

**Author:** Melissa J. Durkee

**Publisher:** Cambridge University Press, 2024

**ISBN:** 9781009334709

This volume offers a new point of entry into questions about how the law conceives of states and firms. Because states and firms are fictitious constructs rather than products of evolutionary biology, the law dictates which acts should be attributed to each entity, and by which actors. Those legal decisions construct firms and states by attributing identity and consequences to them. As the volume shows, these legal decisions are often products of path dependence or conceptual metaphors like “personhood” that have expanded beyond their original uses. Focusing on attribution, the volume considers an array of questions about artificial entities that are usually divided into doctrinal siloes. These include questions about attribution of international legal responsibility to states and state-owned entities, transnational attribution of liabilities to firms, and attribution of identity rights to corporations. Durkee highlights the artificiality of doctrines that construct firms and states, and therefore their susceptibility to change. [More Details...](#)
