Course Learning Outcomes (CLO):

At the end of the course, the students will be able to:

- 1. understand the issues related to the recent trends in the field of engineering and its applications
- 2. formulate the problem definition, analyse and do the functional simulation of the same
- 3. design, Implement, test, and verify the engineering solution related to the problem definition
- 4. compile, Comprehend, and Present the work carried out
- 5. manage project.

Contents:

A student is required to carry out elaborate project work. The project may be either software design and development work or a simulation and synthesis of a problem/system, develop algorithms, and verify the feasibility of the proposed solution. At the end of the semester, the student will be required to submit a detailed report of the literature survey, design problem formulation, analysis, functional simulation and synthesis, work plan, and work done and will defend his/her work carried out before examiners.
