

Nirma University
School of Technology, Institute of Technology
B. Tech (Electronics and Instrumentation Engineering)
Semester V

L	T	P	C
2	0	2	3

Course Code	2EI503
Course Title	Machine Learning

Course Outcomes (CO):

At the end of the course, students will be able to –

- comprehend supervised and unsupervised machine learning algorithm and study the fundamental issues and challenges of machine learning: data, model selection, model complexity, etc.
- evaluate mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised, unsupervised and reinforcement learning
- design and implement various machine learning algorithms to solve real-world applications problems

Syllabus	Teaching Hours
UNIT 1: Introduction	02
Motivation and applications, Basics of supervised and unsupervised learning	
UNIT 2: Regression Techniques	
Basic concepts and applications of Regression, Simple Linear & Multiple Regression, Gradient Descent, Hyper-parameters tuning, Evaluation Measures for Regression Techniques	05
UNIT 3: Classification Techniques	
Naïve Bayes Classification, K-Nearest Neighbors, Classification Trees, Support Vector Machines, Evaluation Measures for Classification Techniques	06
UNIT 4: Artificial Neural Networks	
Biological Neurons and Biological Neural Networks, Perceptron Learning, Activation Functions, Multilayer Perceptron, Back-propagation Neural Networks.	08

D. D. D.

UNIT 5: Dimensionality Reduction & Clustering

03

PCA, k-means Clustering

UNIT 6: Reinforcement Learning

Basics concepts of reinforcement learning, convolution Neural Network, Deep Learning

03

UNIT 7: Applications & Case Studies

Industrial applications of machine learning, patterns classification, case studies.

03

Self Study:

The self-study contents will be declared at the commencement of semester. Around 10% of the questions will be asked from self-study contents.

Laboratory Work:

Laboratory work will be based on above syllabus with minimum 10 experiments to be incorporated.
