

Nirma University
School of Technology, Institute of Technology
B. Tech (Electronics and Instrumentation Engineering)

L	T	P	C
2	0	2	3

Course Code	2EIDE60
Course Title	Factory Automation

Course Outcomes (CO):

At the end of the course, students will be able to -

- recognize the fundamental principles of programmable logic controller
- program PLC using standard programming techniques
- develop an application-oriented project using PLC.

Syllabus	Teaching Hours
<p>UNIT 1: Introduction</p> <p>Introduction, Evolution History, Importance of PLC, Type of PLC's and basic architecture.</p>	03
<p>UNIT 2: Internal Architecture and Interfacing Module</p> <p>CPU, Memory Organization, Power Supply, Input/ Output Interface, Analog and digital input-output modules.</p>	03
<p>UNIT 3: Basic Operation and programming</p> <p>PLC operation, Ladder logic, Logic functions, Basic relay instructions, Timer/Counter Instructions.</p>	06
<p>UNIT 4: PLC Programming instructions</p> <p>Comparison, Arithmetic, Logical, Data handling, input-output instructions.</p>	06
<p>UNIT 5 : PLC Project Development</p> <p>PLC specification and selection criteria, Sensor/Actuator selection, wiring connection with sourcing and sinking module, Wiring diagram, Concept of Redundancy and Safety.</p>	06

UNIT 6: Introduction to Industrial Networking

06

Interface Standard, Modbus and Modbus plus Protocols, CC-Link overview, Industrial Ethernet overview, TCP/IP overview.

Self-Study:

The self study contents will be declared at the commencement of semester. Around 10% of the questions will be asked from self study contents.

Laboratory Work:

Laboratory work will consist of minimum 10 experiments based on the above syllabus.
